

Office 365 Collaboration

Your Foundation to Leverage Office 365 Cloud Productivity

COLLABORATE SEAMLESSLY IN REAL TIME

Collaborate how you want and manage changes in shared documents whether you're working offline, online, or simultaneously with others in Office 365. Red River can guide you through the Microsoft collaboration platform to empower your teams and work more effectively.

Drive More Efficiency – Remote team collaboration can help your business achieve more in less time by working from anywhere—allowing you to be mobile while still having access to essential tools and files.

Manage Employees – Hiring remote workers can help your business find the bright employees regardless of location. It also gives team members a level of flexibility many employees are looking for in a modern workplace.

Streamline Your Communications – With a team collaboration system in place, your team members have a secure channel of communication to quickly contact you or any member of the team.

Make Employees More Satisfied – When your employees can work together seamlessly while doing projects that are suited to their particular skill set, it can transform their entire work experience. And that can lead to increased job satisfaction throughout your team.

Top Benefits of Office 365 Collaboration

Accessibility

Anyone with access can work from anywhere.

Familiar Devices

Greater efficiency because your staff can use the devices they're most familiar with.

Automatic Updates

There is no updating, repairing or replacing servers. That frees your IT staff to focus on critical initiatives that support your business.

Voice Integration

Integration with Skype Provides personal contact capability with IMs, voice, video and screen-sharing.

Office Sync

Sync mail, calendar and contacts across all your devices.
