

ENHANCE YOUR WI-FI EXPERIENCE WITH 5G.

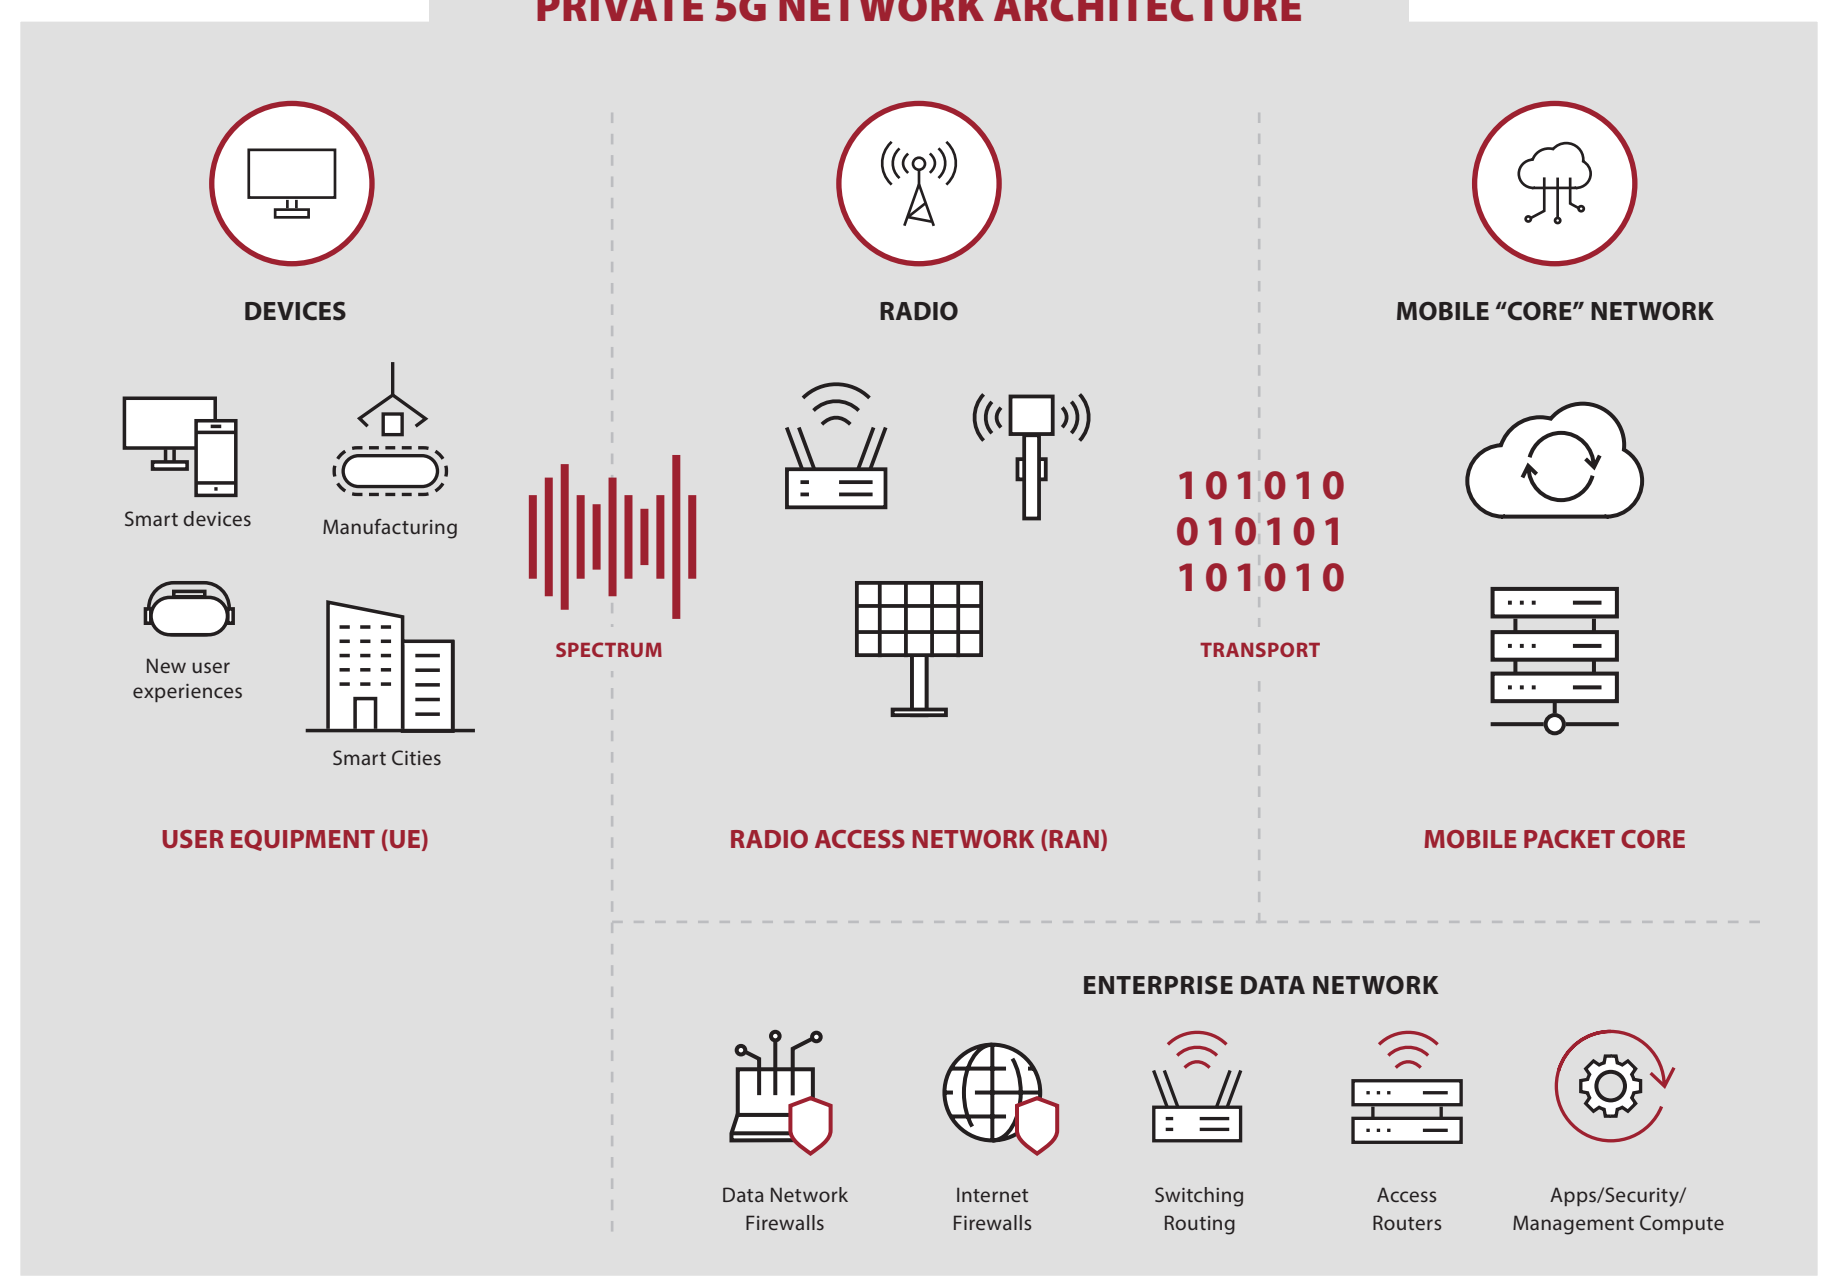

WHAT IS 5G?

Fifth Generation (5G) wireless connection offers high bandwidth, low latency and massive connections that are suitable for more business-oriented applications. This technology or service can be provided through public or private networks.

- A WI-FI 6 / SHORT-RANGE (MAINLY INDOOR)**
High-capacity/throughout coverage in a shared spectrum
- B PRIVATE 5G / VERY WIDE-RANGE (INDOOR/OUTDOOR)**
High-capacity/throughout coverage in a dedicated/shared spectrum
Private 5G networks are highly customizable and can be configured by its operators to allow different levels of priority access when certain network activities are deemed more business-critical than others.
- C PUBLIC 5G / WIDE-RANGE (MAINLY OUTDOOR)**
Coverage in a dedicated spectrum
Public 5G networks are available through Mobile Network Operators (MNOs). They offer equal access rights to all users, sometimes leading to network congestion.

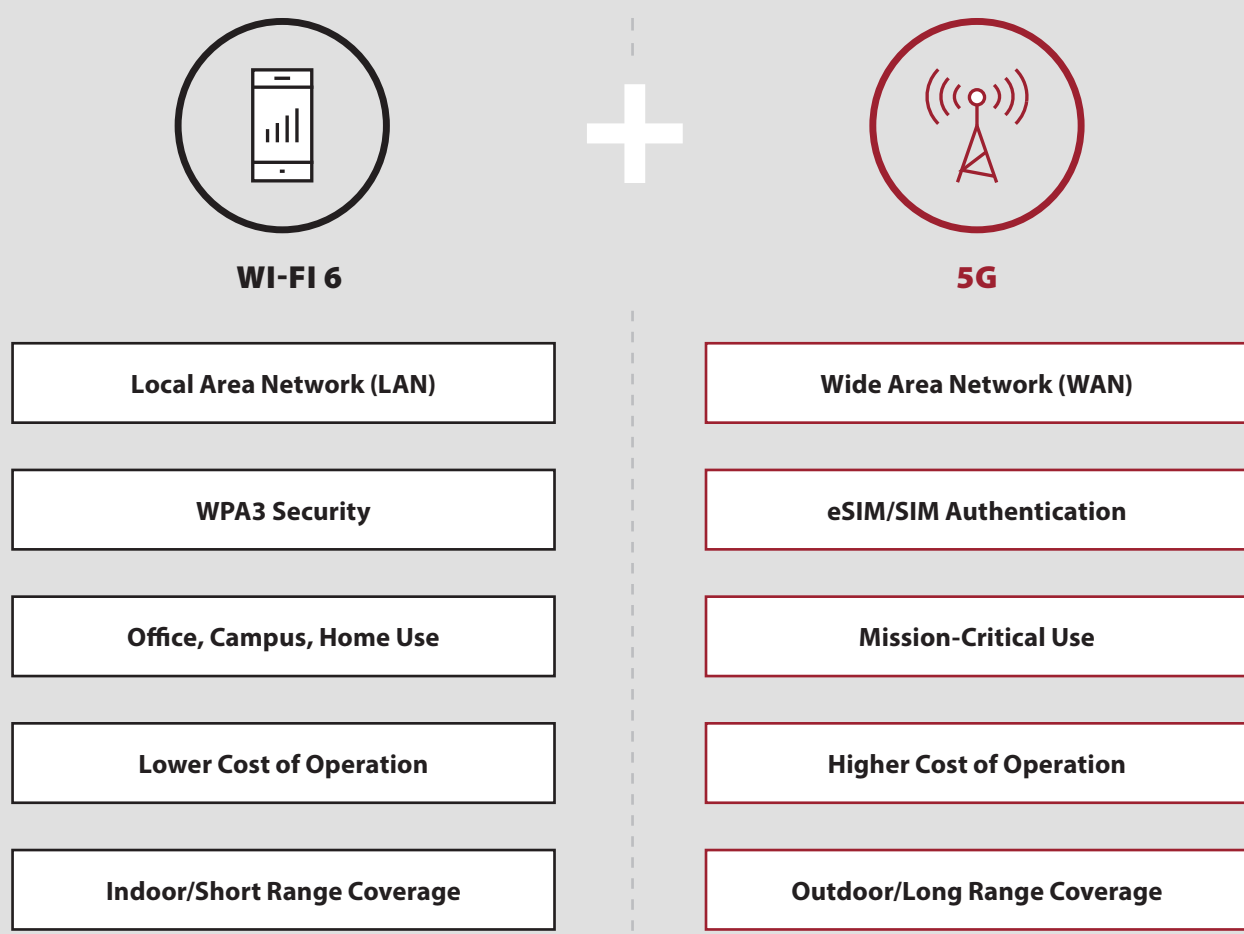

PRIVATE 5G NETWORK ARCHITECTURE

WI-FI + 5G = BETTER TOGETHER

5G and Wi-Fi 6 may seem like competing technologies, but both are inherently designed to address different use cases and offer complementary functionalities. Where the user experience is concerned, 5G and Wi-Fi 6 can both achieve gigabit speeds and low latency.

THE BENEFITS OF 5G

- Improved Reliability
- Faster Gigabit Speeds, Previously Only Available via Fiber
- Lower Latency
- Better Performance
- Improved Energy Efficiency
- Increased Data Volume Capacity

RED RIVER: SUPPORT FOR YOUR WHOLE ECOSYSTEM

Red River is your single source to design, configure, manage and deploy your network while providing managed services for continuous monitoring.

- Scaled to support** your entire ecosystem
- One source** from design to management
- Proactive network monitoring** with our 24/7 Network Operations Center

READY TO GET ON THE RIGHT PATH TO 5G?
