UNLEASH INNOVATION IN STATE AND LOCAL GOVERNMENT WITH THE CLOUD

State and Local Governments are innovating to control costs and better serve their Citizens leveraging the power, flexibility and the security of the Cloud. Constituents expect to be able to interact and transact with their State and Local Governments using the same modern platforms available to commerce. State and Local Governments need a strategy, the tools and the expertise to smoothly transition from their legacy systems to today's Cloud based architecture. Red River in partnership with AWS supports this transformation.

A CLOUD ECOSYSTEM THAT SUPPORTS STATE AND LOCAL GOVERNMENT

With a modernized cloud environment, State and Local Governments can improve service with cost-effective, scalable and secure systems. Red River has provided IT Solutions to the Federal Government for over 28 years. We bring this extensive experience and success in addressing the unique challenges of budget cycles, legacy systems and the complexity of government operations to our State and Local Customers. We are ideally suited to support our State and Local Government customers on their journey to harnessing the opportunity that access to AWS offers.

Here are some of the use cases we support our State and Local Governments to implement:

Content Delivery Network
The Content Delivery Network (CDN) stores data, materials and videos in the cloud.

Contact Center
The contact center offers cloud scalability for supporting as many end users as necessary to reach service goals.

Disaster Recovery
While no industry is immune from ransomware attacks, the AWS Elastic Disaster Recovery (DRS) can help mitigate the attack by relaunching unencrypted versions of your servers from the cloud to avoid paying ransom or experiencing downtime.
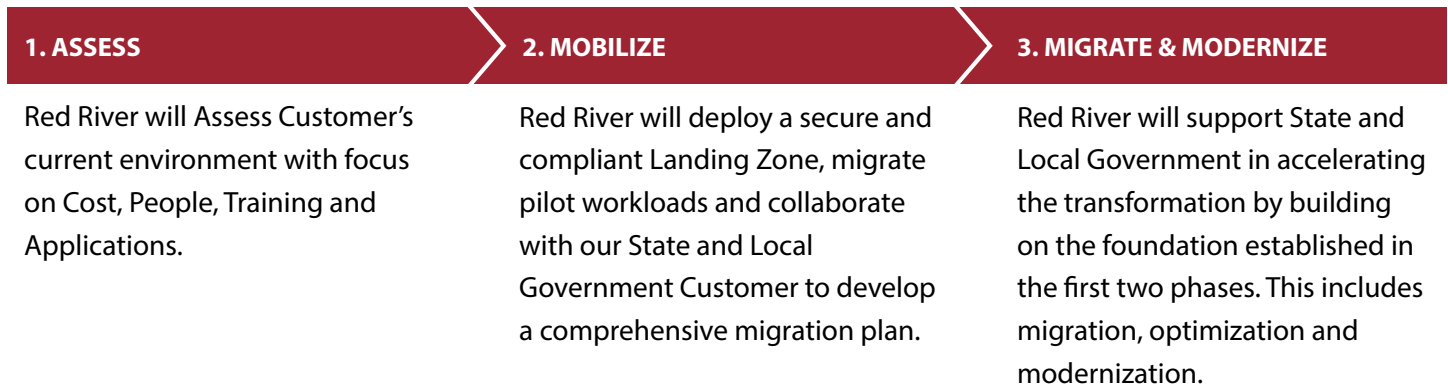

Virtual Desktop Infrastructure
Allows computer instances to be spun up and delivered remotely to an end terminal like a laptop tablet, mobile device or a desktop PC.

TECHNOLOGY DECISIONS AREN'T BLACK AND WHITE. THINK RED.

GET THE BENEFITS OF CLOUD FASTER WITH AWS MIGRATION ACCELERATION PROGRAM (MAP)

The AWS Migration Acceleration Program (MAP) is a proven framework that greatly increases the odds of success and speed that Organizations migrate from traditional data centers to the Cloud. Red River is an AWS Migration Competency Partner which validates our AWS Migration experience and allows us to tap into AWS funding on behalf of our State and Local Government Customers.

There are three steps to the MAP:

1. ASSESS	2. MOBILIZE	3. MIGRATE & MODERNIZE
Red River will Assess Customer's current environment with focus on Cost, People, Training and Applications.	Red River will deploy a secure and compliant Landing Zone, migrate pilot workloads and collaborate with our State and Local Government Customer to develop a comprehensive migration plan.	Red River will support State and Local Government in accelerating the transformation by building on the foundation established in the first two phases. This includes migration, optimization and modernization.

RED RIVER SIMPLIFIES CLOUD FOR STATE AND LOCAL GOVERNMENT

Red River is a proven technology solutions provider and integrator for Government. We have a proven track record of customizing technology solutions to deliver:

- **Lower costs before, during and after cloud deployment.**
- **Increased productivity for operation staff.**
- **Improved operational resilience at all levels of the organization.**
- **Increased organizational agility.**

With Red River and AWS, your cloud migration process is made simple. Contact us at cloud@redriver.com to get started today.
